

# SYSTEM REQUIREMENT SPECIFICATION

## Functional Requirements

### Project Management

The system shall allow project owners to create, configure, and publish projects.

### Recruitment & Assignment

The system shall allow collaborators to apply and owners to approve applicants.

### Task Lifecycle Management

The system shall manage task states: *In Progress* → *Submitted* → *Approved / Revision*.

### Submission Versioning

Each submission shall create a timestamped, immutable version.

### XP Automation

The system shall award XP only after explicit approval by the project owner.

### XP Calculation Rules

XP shall be calculated using:

- Task difficulty
  - Deadline adherence
  - Rework penalty
- Final XP = Base XP + Bonus – Penalty

### Mentorship Support

The system shall allow mentors to provide guidance and recommendations without evaluation authority.

### Audit Logging

All critical actions shall be logged immutably.

### Administration & Enforcement

The system shall support warnings, suspensions, and account bans.

## **Non-Functional Requirements**

### **Transparency**

All workflow transitions must be traceable through audit logs.

### **Determinism**

XP calculation shall be rule-based and deterministic.

### **Security**

Role-based access control must be enforced.

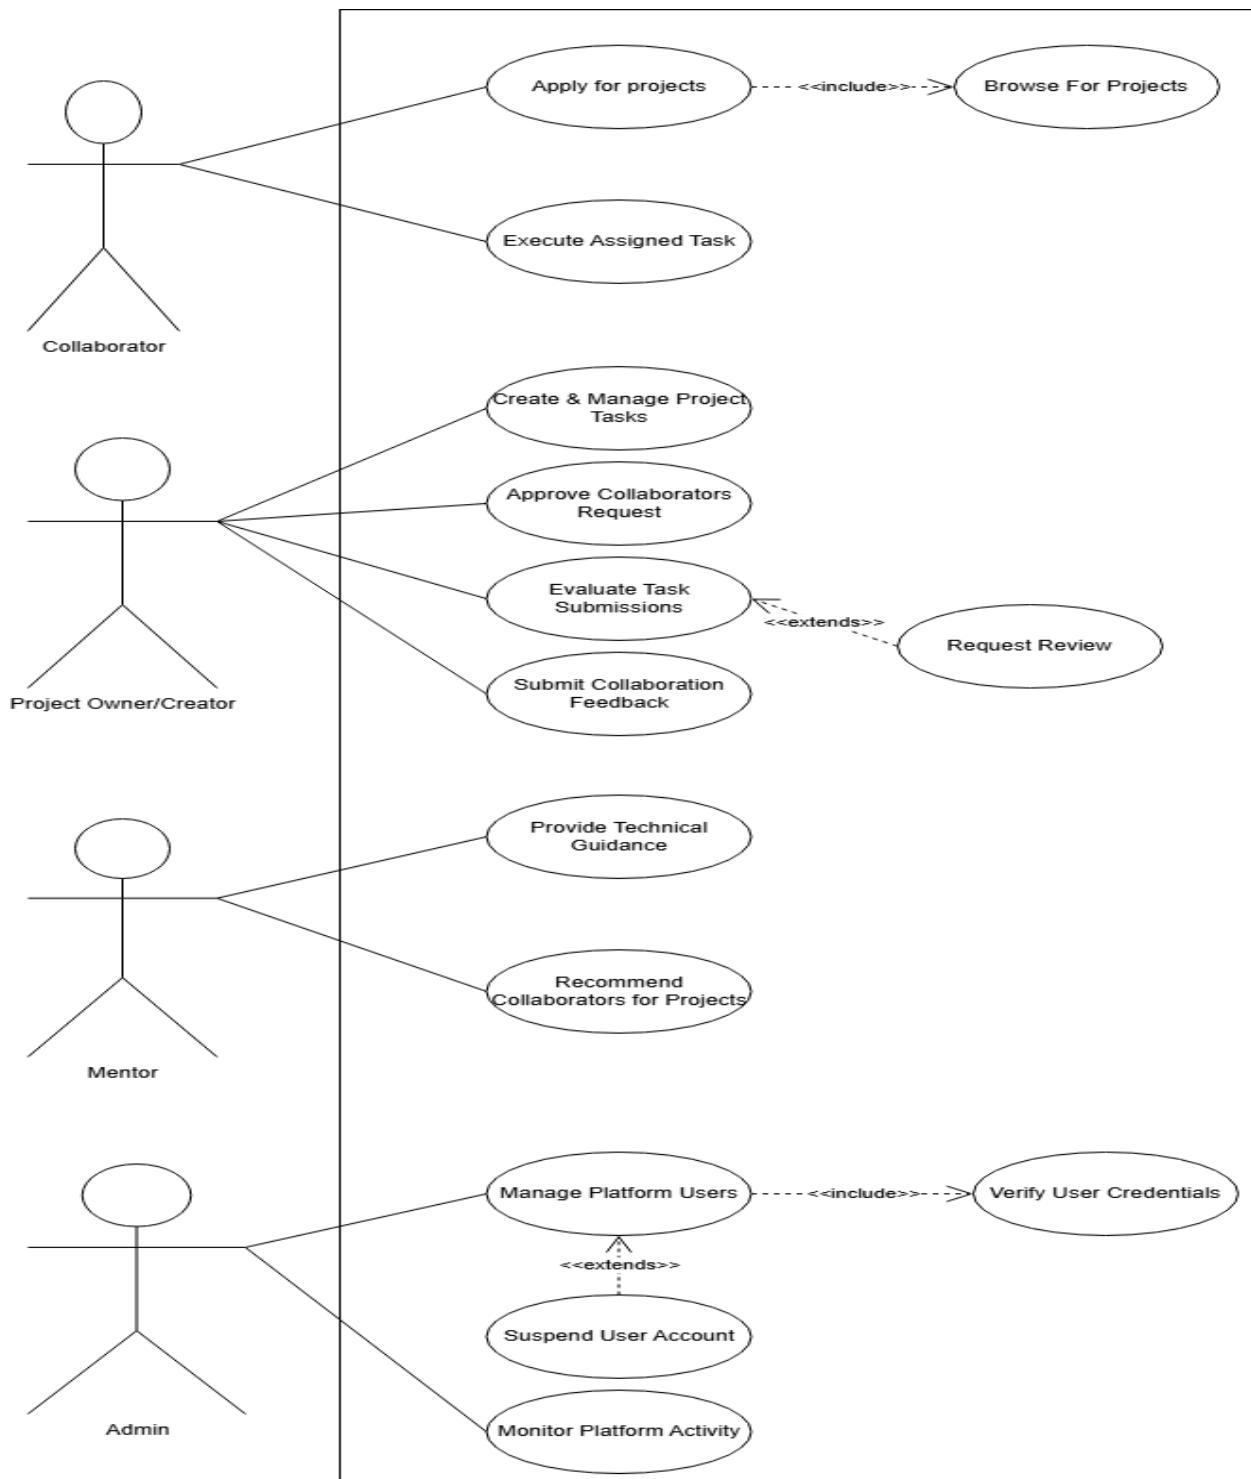

### **Reliability**

XP transactions must be idempotent (exactly once).

### **Scalability**

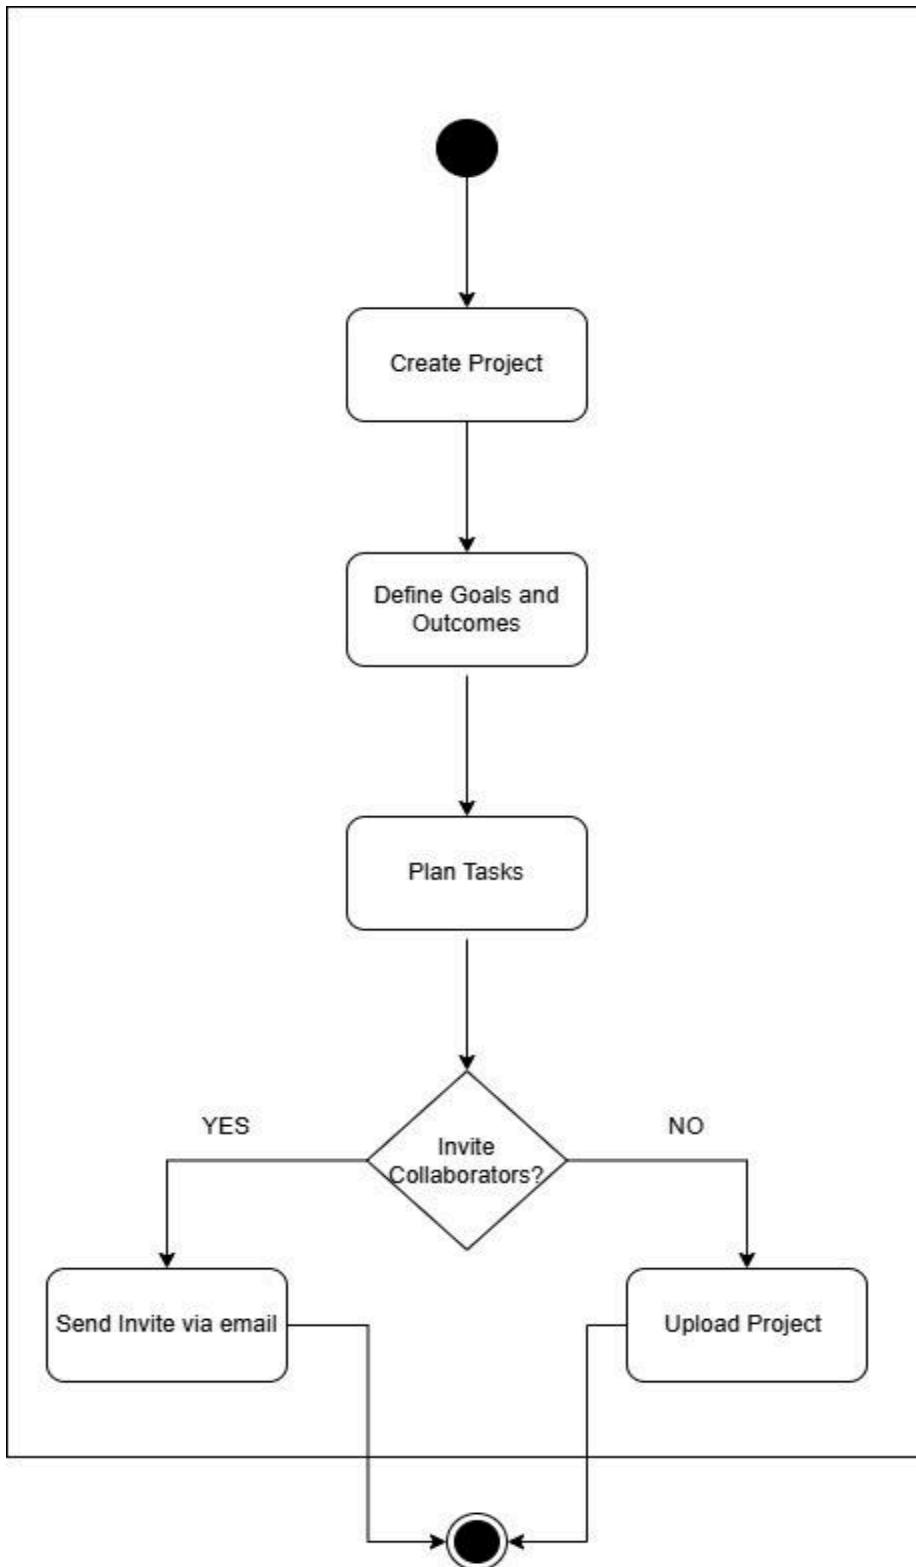

System shall support concurrent users and multiple projects.
